WE ARE A MOBILE APPLICATIONS STUDIO ESTABLISHED IN VIETNAM BY EXPERIENCED EXPATRIATES.

WHAT WE DO

For our customers, we design and code high quality native applications (iOS & Android) that delight their users and are affordable.

We use the native device development language to build efficient, optimized, great looking applications that provide a fluid user experience.

For us, flawless and bug-free implementation is a prerequisite.

We take a special care writing high quality code even if it is not visible to our users. But this is rarely enough to guarantee success. In addition to a great developer team, your app popularity depends on a well planned business strategy built on a good market knowledge and a powerful UX/UI design.

At Siclo, we are well aware of this challenge so we have developed a full service and a la-carte approach on top of our development offer. Whether the App is targeting consumers (via publication through the stores) or an internal professional audience (business app), this approach allows us to meet your specific needs, fit with your organization and support you whatever your project's progress.
